Your concerns... \* I want an easy fuel ordering system with timely and reliable delivery."  
\* We don't want to be holding too much or too little fuel at any one time."

## Supply Chain Management

Ensure optimal stock and ease fuel ordering processes

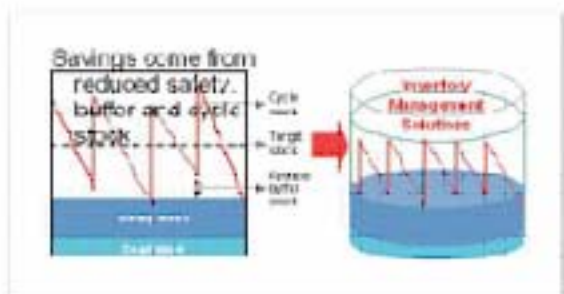

We have developed Inventory Management Solutions, or IMS, which links your fuel requirements to our supply chain, to ensure that you get the right amount of fuel at the right time, and at the right cost.

### Optimal stock level

Not only do we manage your inventory, we also ensure that it is at optimal stock level, thus making sure that you don't pay more than you need to. The process runs continuously to unify

### Big savings on time and money

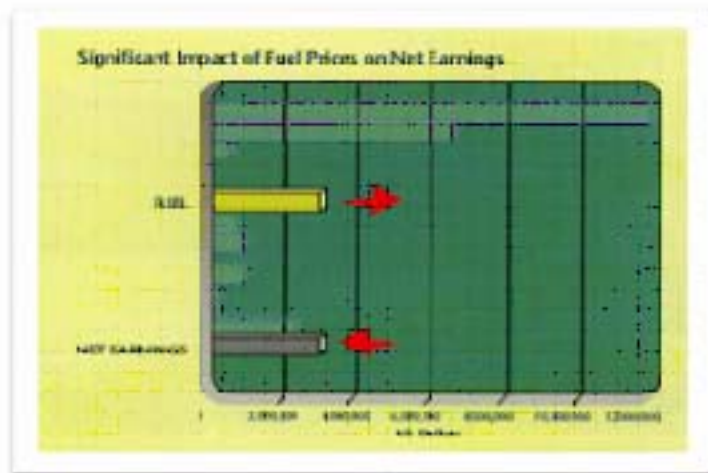

The first savings you will notice will be in time and administration costs. The time taken to place an order involves taking stock of your product in the tanks, estimating consumption, and placing an order that will fit your working capital availability

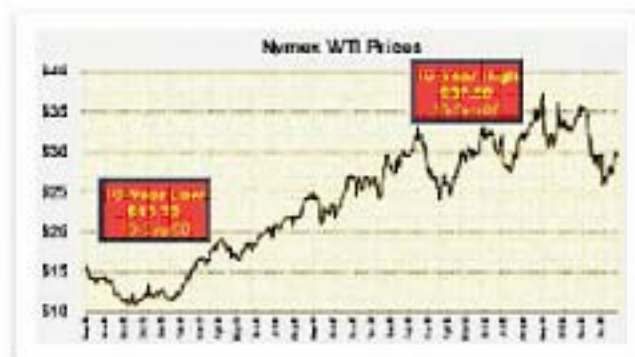

Your concerns... " We need to commit on long term pricing to our customers."  
" Fuel price fluctuations can drastically affect our bottom line."

## Fuel Price Risk Management

Reduce surprises on fuel prices

We have seen how the uncertainty of fuel prices can pose a serious problem to you. To help you plan your production, product cost and allocation of resources, Fuel Price Risk Management allows you to manage your oil price risks and ensure that oil price does not prevent you from achieving your company targets.
